M 241 seldom allows them to reach maturity. Besides the drought, birds, ants, locusts and rats often destroy the crops. The same fruits and cereals are cultivated by the Mataco and the Tobas in Bolivia, maize and manioc however with greater success than among the Choroti, since the climate there is more favourable. On the whole, the Chaco tribes are greatly dependent for their subsistence on the crops nature spontaneously gives them, and the great rôle that wild fruits like the algaroba, the chañar, the tusca, and a few others play in the economic life of these Indians has already been mentioned. It is mainly owing to these useful trees that the interior parts of the Chaco are habitable for people living in a state of nature.

T 241 184 439 The Bolivian Tobas, although they cultivate maize on a small scale, still get their main supply of this important cereal from the Avas in the north, with whom they carry on a sort of trade. Generally they get the maize in exchange for dried fish, which they store in considerable quantities during the summer season.

M T C 226 Fishing is the main occupation of the tribes living on the River Pilcomayo, and these Indians are therefore never seriously threatened by starvation. During the rainy season, when the river is swollen, fishing is often impossible; the proper season begins in April or May when the water is low and fish appear in abundance along the banks of the river. All Pilcomayo tribes use nets made of *caraguatá* fibres and of a peculiar triangular form, and since they have no canoes or vessels of any kind they always catch the fish by swimming and diving, in which they display remarkable skill. The Tobas, who are particularly skilled fishermen, use not only nets, but also, and I believe more commonly, bow and arrrows, a method only occasionally practised by the Choroti and the Mataco. When the Indians have caught a fish they instantly kill it with a small club of palo santo if it is a large one, if it is of a smaller kind simply by biting the head.

T 251 438 During a big fishing expedition the Indians, at any rate the Tobas, sometimes catch fish in enormous quantities. They preserve them by roasting, then store them in special shelters, formed of a roof made of reeds and palm-leaves resting on four poles. This dried fish forms an important article of exchange among the Tobas.

● M T C ● 224 Next to fishing, hunting is the most important means of subsistence of the Chaco Indians, but in this respect also the Choroti and Mataco are inferior to the Tobas. Especially the Choroti seemed to me to be poor hunters. In the parts of the Chaco inhabited by these Indians game is scarce, and with their comparatively small bows and arrows they only

rarely succeed in killing a tapir, a deer, or a wild pig. Besides, the deer is an animal of which the Choroti have a superstitious fear, and its flesh is never eaten by them; when they kill one, they only keep the hoofs, which are used as magical rattles, the leg-bones, of which instruments used for ceremonial blood-letting are made, and the skin which is used for different purposes. Of birds, as I have stated before, the ostrich is especially appreciated both on account of its flesh and its plumes, which play a great role as personal ornaments and to which magical power is ascribed. In hunting the ostrich the Choroti, like other Chaco tribes, avail themselves of the trick of binding palm leaves together and placing them on the head and shoulders so as to resemble a young tree. Disguised in this way, the Indians generally succeed in getting within easy range of the shy bird, and are thus able to bring it down with their arrows. Another trick of which the Indians often make use in hunting is that of imitating the cry of certan animals and birds by means of round wooden whistles, particularly invented for this purpose. With the same whistles, which are supposed to possess magic power, they also imitate the supposed whistling sound of the spirits, which are thereby frightened away.

T 224

The Tobas are much more skilled hunters than the Choroti and the Mataco, and, at least in Bolivia, the country inhabited by these Indians is comparatively rich in game. Thus tapirs, deer, and wild pigs, of which latter there are two varieties, are frequent in the forests, and the Tobas hunt them eagerly, using bows and arrows as well as lances as weapons. All Indians, and particularly the Tobas, are expert in stalking ainmals; the latter are thereby aided by their dogs which are specially trained for the hunting of the wild pig. Even the jaguar and the puma are hunted by the Tobas with dogs.

M I C 231

Of domestic animals the Chaco Indians keep dogs, sheep and goats as well as fowls. [1] Horses were long ago introduced among the Tobas who

[1] Nordenskiöld, when treating of the domestic animals of the Bolivian Indians in his *Ethnography of South America seen from Mojos in Bolivia*, p. 114, amongst other things mentions that in Mojos only the civilized Indians keep cattle, which have been introduced by the whites, and adds the following erroneous statements as regards the Chaco Indians: »In the Chaco, on the other hand, *even the independent Indians have cattle* which play an important part for them. *The Indians keep no sheep or goats*». I wish to point out that neither the Tobas nor the Choroti, nor the Mataco on the Pilcomayo keep cattle. On the other hand, sheep and goats are kept by *all* Pilcomayo tribes and, as far as I know, by all other Chaco Indians, except perhaps some savage tribes in the interior of the unknown Chaco.

Güisnais

Ci 301 302 171 /321 cont./ Doubtless through being very close to the Toba, they pierce their ear lobes, in which they put pieces of wood, and they also stain their faces.

Ci 648 [464] In the expeditions to the Paraguay they have never shown themselves to be hostile to the whites and soldiers; rather they have lent important services and it was they who saved the life of Señor Touvar and his companions when they became separated from the expedition. Therefore the reduction of these Indians to civilized life would be very profitable.

## Güisnáis

M 131 101 These Indians occupy the western bank of the Pilcomayo facing the Choroti Indians and southwest of the region occupied by the Mataco. The geographic degree of their territory, with a very slight difference, is the same as that of the Choroti, since they are separated from the latter only by the river bed.

M 101 181 241 231 197 They are a division of the Mataco; they speak the latter's language with very little difference; their customs are nearly identical and their number quite small. They are of a peaceful nature like the Choroti, and like them, they plant gourds and other vegetables. They also devote themselves to the raising of domestic animals, such as cows, horses, sheep, goats, and chickens.

M 167 177 464 ●224 Even the Güisnáis frequently come out for jobs in the Argentine Republic, from where they also bring back weapons, in order to use them particularly in the woods, killing birds, wild boars, deer, and other quadrupeds.

M 174 771 776 [756] They have more religious ideas than other tribes, and it seems that their great-grandparents might have belonged to some former Argentine mission, because, more than others, they recognize a true divinity. /322/ Nonetheless in their great ignorance they confuse ideas, and in great fear they recognize in sorcerers a power that they do not have.
